EDUCATION

Computer Science 2018 – Present
Erciyes University Kayseri

SKILLS

Frontend & React Development
- React.js, Redux / Redux Toolkit
- React Router, Custom Hooks
- HTML5, CSS3, DOM Manipulation
- Single Page Application (SPA) Architecture

Development & Design Tools
- Git & GitHub (Version Control)
- Figma (UI/UX Design Handoff & Inspection)
- Vercel & Vercel CLI (Hosting & Deployment)
- Terminal / CLI & tmux

Programming Languages
- JavaScript (ES6+)
- Java

Backend Development
- Java (Core & OOP)
- RESTful API Design & Integration
- Server-Side Business Logic
- HTTP Protocol & JSON Data Formatting

COURSES

Full-Stack Developer 02/2026 – Present
WorkInTech
Completed an intensive Full Stack Web Development program at Workintech. Developed hands-on projects utilizing JavaScript (ES6+), React, Redux, and modern web technologies on the frontend, alongside Java, OOP principles, and Data Structures on the backend to master end-to-end software development.

PROJECTS

Yitik Sözlük
Frontend Web Application | React, Redux & Tailwind CSS
- Developed an audio-interactive web experience designed to explore forgotten and literary Turkish words.
- Engineered sound feedback mechanisms, ambient audio, and navigation tones scaled by word size using Tone.js.
- Designed a responsive UI using Tailwind CSS 4 and built smooth entry animations with Framer Motion.

Lup
Interactive Web & Animation Application | React, GSAP & Tailwind CSS
- Developed an interactive web application featuring rich UI animations and smooth micro-interactions powered by GSAP (GreenSock) and React.
- Designed custom press-and-hold interaction mechanisms and dynamic animation triggers to enhance user experience.
- Built a high-performance, responsive, and modern user interface using Tailwind CSS across all screen sizes.

DEPREM - Real-Time Earthquake Tracking & Notification System
Full Stack Application | API, Web, Docker
- Architected a modular full-stack earthquake tracking system featuring a decoupled Backend API and Frontend Web application.
- Containerized the backend service using Docker to ensure consistent deployment environments across development and production.
- Integrated external earthquake data feeds to deliver structured API endpoints and responsive web interfaces.
